ESSENTIAL SKILLS DEVELOPMENT

Sparking Student Engagement

CHALLENGE

Samantha, a High School Family and Consumer Sciences teacher, wanted all her students actively engaged during lessons —and to create meaningful classroom discussions around what they were learning.

SOLUTION

They implemented Future Ready, a habit-formation app that uses nanolearning and gamification to teach essential life and career skills. The program's modules are mapped to the U.S. Department of Education's Employability Skills Framework and the Perkins Collaborative Research Network.

RESULTS

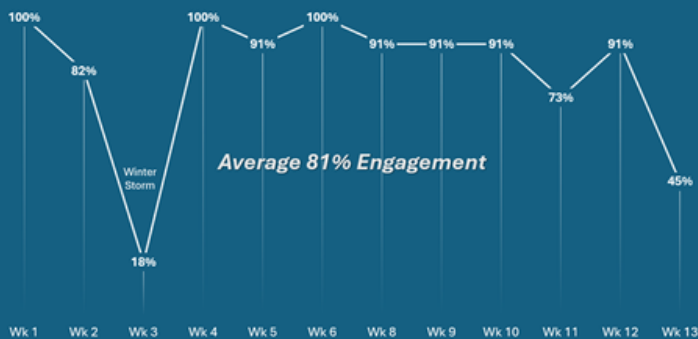

Student engagement in classroom discussions increased significantly. Lessons became more interactive, and students began connecting their learning to real-world applications.

Engagement with the Future Ready game was between 81% to 90% engagement with several weeks with 100% engagement.

"Future Ready has taught me soft skills for the workforce."
